Login CSS

```css
.card {
    /* Add shadows to create the "card" effect */
    box-shadow: 0 4px 8px 0 rgba(0,0,0,0.2);
    transition: 0.3s;
    width: 30%;
}

.judul{
font-weight: bold;
font-size: 25px;
}

.btn {
    width: 100%;
    padding: 12px;
    border: none;
    background: green;
    color: white;
    border-radius: 4px;
    margin: 5px 0;
    opacity: 0.85;
    display: inline-block;
    font-size: 17px;
    line-height: 20px;
    text-decoration: none; /* remove underline from anchors */
  }

  .btn-cancel {
    width: 20%;
    padding: 12px;
    border: none;
    background: red;
    color: white;
    border-radius: 4px;
    margin: 5px 0;
    opacity: 0.85;
    display: inline-block;
    font-size: 17px;
    line-height: 20px;
    text-decoration: none; /* remove underline from anchors */
  }
```

Login.jsx

```jsx
import React from 'react';
import './Login.css';

const HelloComponent = () => {
    return (
        <center>
            <h1>Form Login</h1>
            <div className="card">
                <div className="judul">Tugas Pertemuan</div>
                <div className="judul">Tiga</div>
                <br></br>
                <br></br>
                <br></br>
                <div>
                    <label><b>Username</b></label>
                    <label> <input type="text" placeholder="masukkan username"></input></label>
                </div>
                <br></br>
                <div>
                    <label><b>Password</b></label>
                    <label> <input type="text" placeholder="masukkan username"></input></label>
                </div>
                <div style={{ padding: 10 }}>
                    <button className="btn">Login</button>
                </div>
                <div>
                    <label><input type="checkbox"></input></label>
                    <label>Remember Me</label>
                </div>
                <br></br><br></br>
                <div>
                    <button className="btn-cancel">Cancel</button>
                </div>
            </div>
        </center>

    )

}

export default HelloComponent;
```

Index.js

```javascript
import React from 'react';
import ReactDOM from 'react-dom';
import './index.css';
import App from './App';
import * as serviceWorker from './serviceWorker';
import HelloComponent from './component/HelloComponent';
import StateFullcomponent from './container/StateFullcomponent';
import LoginComponent from './component/LoginComponent';

// function HelloWorld() {
//     return <p> ini adalah function component</p>
// }

// const HelloWorld = () => {
//     return <p> ini adalah function component</p>
// }

// class StateFullcomponent extends React.Component {
//     render() {
//         return <p>ini adlaaha statefull component</p>
//     }
// }

ReactDOM.render(<LoginComponent />, document.getElementById('root'));

// If you want your app to work offline and load faster, you can change
// unregister() to register() below. Note this comes with some pitfalls.
// Learn more about service workers: https://bit.ly/CRA-PWA
serviceWorker.unregister();
```
